

PyCitySchools Three Observable Trends

1. Top performing schools are all Charter type, while bottom performing schools are all District type. Charter has overall better performance than district type.
2. The schools with the least budget range per students have the highest overall passing rate. Therefore, a better academic result does not have to be linked to higher budget spending per student, probably more linked to better ways of teaching.
3. The small schools (<1000 students) have the highest overall passing rate, while the large ones have the lowest. Small size probably makes school management more efficient, thus the better academic results.
